Calendar-ProductType recommendation app (Jonathan SGP <> AiGENThix)

Required Files for project

- **.env**
- **app.py**
- **data_cleaner.py**
- **rules.py**
- **llm_parser.py**
- **client_plan_llm.py**
- **integrated-timeline.ipynb**
- **data.xlsx**
- **requirements.txt**
- **jonathan-writing-profile.txt**
- **marketoutlook-temporary.txt**
- **writing-style-prompt.txt**

Project Dependencies

- VS Code
- VS Code Jupyter extensions
- Python 3.10 or any version after 3.10
- All libraries inside requirements.txt

Setup Operations (One time only):

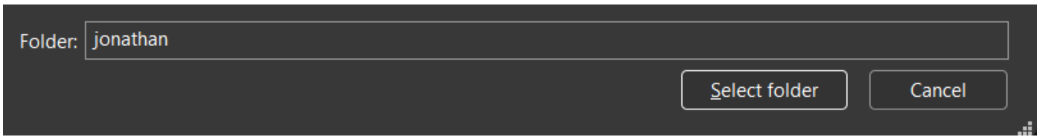
1. How to Setup Virtual Environment

- How to open the project folder in VS code
  1. Open VS code
  2. Click on **File** option in the top bar

  3. Select **Open Folder**

  4. Go to the folder in which you have setup the files

  5. Click on Select folder



- How to Setup Virtual Environment
  1. To open VS code terminal, use the shortcut **CTRL + J**
  2. In the terminal, type the following command to initialize a python environment

---

python -m venv venv

2. How to Activate Virtual Environment

- **NOTE: You do not always have to create a virtual environment as long as a folder named 'venv' exists in your project folder. But, everytime you run the code, you need to always activate the virtual environment.**
  1. In the VS code Terminal, input the following command

---

venv/Scripts/activate

3. How to install dependencies

- **NOTE: You do not always have to install dependencies, as long as you have done it once in your venv its fine.**
  1. Activate Virtual Environment (venv/Scripts/activate)
  2. In the terminal, use the following command to install required libraries (might take some time)

---

pip install -r requirements.txt

4. Setup .env file

1. Open the .env file in VS code
2. It should look something like this:

```
.env
1    GEMINI_API_KEY=
2    GEMINI_MODEL=gemini-2.5-flash
```

3. In line 1, after the '=', paste your Gemini API key
4. Save the file (ctrl + S)
5. End Result:

```
.env
1    GEMINI_API_KEY=AIzaSyBQIZK2A8**********Wg0LMrZeUi4c8uY
2    GEMINI_MODEL=gemini-2.5-flash
```

- **Your Setup is completed, Now, you don't need to do anything except step (2) every time you want to run the code**
- **The Indicator for an Active Virtual Environment is (venv) in your command terminal**

```
(venv) PS D:\Uni Stuff\Internships\AiGENThix\TestJonathanInstructions>
```

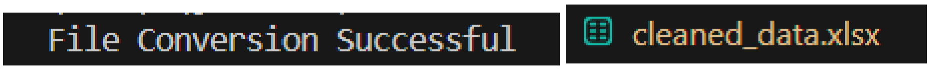
Running the code and application

1. How to clean data

1. First, make sure that **"data.xlsx"** is the name of the file in which you have the raw data
2. Paste that file inside the project folder
3. Activate Virtual Environment if you haven't (venv/Scripts/activate)
4. In the terminal, type the following command

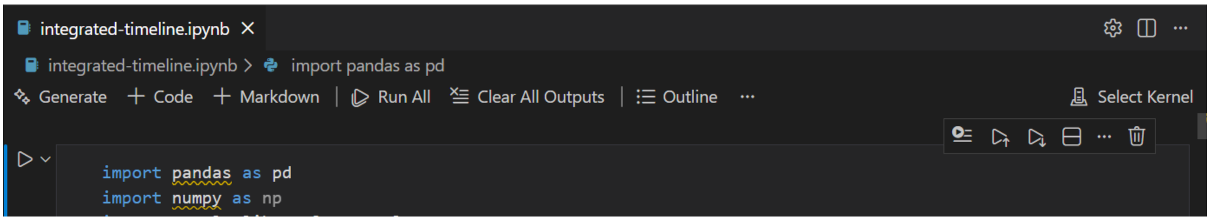
python data_cleaner.py

5. This will output a new file called: 'cleaned_data.xlsx'

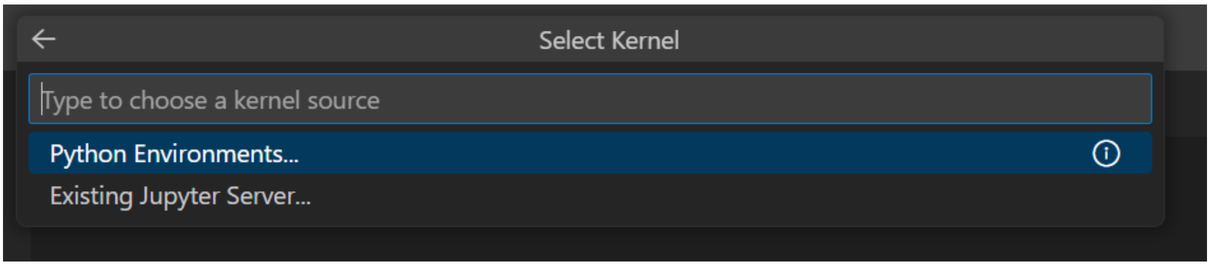


2. How to run analytics and Machine Learning Models

1. First, make sure that **"cleaned_data.xlsx"** is present in your project folder
2. Open the file **'integrated-timeline.ipynb'**
3. This is a Jupyter notebook, now, select your **venv** as the kernal.
4. First click on 'Select Kernal'. If it already shows **'venv'** then you may skip step 4, 5 and 6.

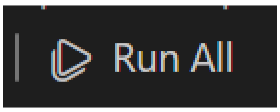


5. Click on 'Python Environements'



6. Click on 'venv'

7. Click on the 'Run all' button



8. This will output a new file called: **'recommendationOuput.xlsx'**

3. How to run Calendar application (Streamlit application)

1. First activate Virtual Environment if you haven't (venv/Scripts/activate)
2. In the terminal, type the following command

```
streamlit run app.py
```

3. If you didn't directly get redirected, then go to your preferred browser and search for:

```
http://localhost:8501
```
