

Calendar-ProductType recommendation app (Jonathan SGP <> Aigenthix)

Required Files for project

- **app.py**
- **integrated-timeline.ipynb**
- **cleaned_data.xlsx**
- **recommendationOutput.xlsx**
- **requirements.txt**

Project Dependencies

- VS Code
- Python 3.10 or any version after 3.10
- All libraries inside requirements.txt

1. How to Setup Folder

1. Create a new folder in your computer
2. Paste the required files in the said folder

2. How to Setup Virtual Environment

- How to open the project folder in VS code
 1. Open VS code
 2. Click on **File** option in the top bar
 3. Select **Open Folder**
 4. Go to the folder in which you have setup the files
 5. Click on Select folder
- How to Setup Virtual Environment
 1. To open VS code terminal, use the shortcut **CTRL + J**
 2. In the terminal, type the following command to initialize a python environment

```
python -m venv venv
```

3. How to Activate Virtual Environment

- **NOTE: You do not always have to create a virtual environment as long as a folder named 'venv' exists in your project folder. But, everytime you run the code, you need to always activate the virtual environment. If you happen to move your project folder or delete the 'venv' folder, then repeat the step 3 and 4.**
 1. In the VS code Terminal, input the following command

```
venv/Scripts/activate
```

4. How to install dependencies

- **NOTE: You do not always have to install dependencies, as long as you have done it once in your venv its fine. If you happen to move your project folder or delete the 'venv' folder, then repeat the step 3 and 4.**
 1. Activate Virtual Environment (venv/Scripts/activate)

2. In the terminal, use the following command to install required libraries (might take some time)

```
pip install -r requirements.txt
```

5. [How to run Streamlit application \(Calendar application\)](#)

1. First activate Virtual Environment (venv/Scripts/activate)
2. In the terminal, type the following command

```
streamlit run app.py
```
